

Sumin Jung

📍 Seoul, Republic of Korea ✉️ sumin00716@gmail.com ☎️ +82-10-6487-8026 in suminjung716 🌐 jasmine00716

Research Interests

Large-scale multimodal and foundation models for medical AI; vision-language learning; medical image analysis; clinical representation learning across institutions, modalities, and tasks.

Education

Korea University, Seoul, Republic of Korea

Mar 2023 – Feb 2025

M.S. in Computer Engineering

- Advisor: Prof. Jin Tae Kwak; GPA: 4.0/4.5
- Selected coursework: Medical Imaging; Efficient AI and Hardware Design; Advanced Digital Signal Processing; Random Signal Analysis

Dongduk Women's University, Seoul, Republic of Korea

Mar 2019 – Feb 2023

B.S. in Computer Science

- GPA: 3.72/4.5

Research Experience

PathRadX: Pathology Foundation Models for Radiology

2025

Contributing Researcher, DeepClue Inc.

- Supported data preparation, result analysis, and manuscript drafting for a study evaluating whether a frozen pathology foundation model could transfer to radiology tasks.
- Contributed to experiments spanning MURA, RSNA pneumonia, and MedFMC datasets and comparisons of modality-adaptation and task-classification strategies; collaborators led model design, implementation, and experiment execution.
- Published in the MedAGI 2025 workshop proceedings held with MICCAI 2025.

ISLES 2024: Multimodal Infarct Segmentation

2024

Research Design and Analysis, Korea University

- Contributed problem definition, data preparation, method and experimental design, comparative analysis, and abstract preparation for a 3D Vision Transformer using NCCT, CTP, CTA, and Tmax inputs.
- Collaborated with a teammate who implemented the code and ran the experiments.

3D-MoReT: Collateral Imaging from 4D MR Perfusion

2023 – 2024

First Author and Lead Researcher, Korea University

[Code](#) [🔗](#)

- Led the study from problem formulation and data preprocessing through model design, implementation, experiments, comparative analysis, and initial manuscript drafting.
- Designed a 3D CNN-Transformer regression model combining MobileNetV2, MobileViT, ViT, and residual/skip connections to generate five-phase collateral maps from 4D DSC-MRP.
- Evaluated the model on 952 patients from two university hospitals; outperformed similarly sized models and matched substantially heavier baselines.
- Published the work as first author in the *International Journal of Computer Assisted Radiology and Surgery* and presented it at CARS 2024.

Industry Experience

DeepClue Inc.

Sep 2024 – Jun 2026

Team Leader, Engineering & Manufacturing Team

- Led the translation of collateral-imaging research into DeepClue-Precise MRI/CT software as a medical device (SaMD), coordinating clinical requirements, system architecture, implementation, verification, regulatory documentation, and team operations.
- Developed the MRI application and image-processing pipeline end to end—including DICOM preprocessing, image analysis, GUI, output generation, and testing
- Designed the reusable application framework adopted by the CT product and collaborated with the developer responsible for its CT-specific core image-processing pipeline.
- Designed and executed software verification and validation, prepared regulatory and quality-system documents,

coordinated with hospitals and external organizations, and led activities supporting MFDS Class I medical-device registration.

- Supported hospital prototype deployment and converted clinical feedback into software requirements and validation criteria.

Presentations & Challenges

-
- Hyun Yang, **Sumin Jung**, and Jin Tae Kwak. “From Pathology to Radiology: Evaluating the Applicability of Pathology Foundation Models.” Poster, MedAGI Workshop at MICCAI 2025. Sep 2025
- Hyun Yang, **Sumin Jung**, and Jin Tae Kwak. “3D Vision Transformer Based Infarct Segmentation.” ISLES 2024 Challenge. 2024
- Sumin Jung**. “3D Mobile Regression Vision Transformer for Collateral Imaging in Acute Ischemic Stroke.” Poster and three-minute oral presentation, CARS 2024. Jun 2024

Honors & Awards

-
- **Best Poster Award**, 38th Annual Conference of the Korean Society of Medical Imaging Informatics, 2024
 - **9th Place**, Ischemic Stroke Lesion Segmentation Challenge (ISLES 2024), 2024
 - **Honorable Mention**, Samsung AI Challenge, Image Quality Assessment, 2023
 - **Gold Prize**, Joint Capstone Design Competition, 2022

Patent

-
- Hyun Yang, **Sumin Jung**, and Hong Gee Roh. “Machine Learning Method for Generating Hypoperfusion Lesion Segmentation Maps from Cerebral Collateral Blood Flow Images Obtained Using Multi-Phase Dynamic Images, and a Method and System for Predicting Ischemic Penumbra Area Using Generated Hypoperfusion Lesion Segmentation Maps.” *Republic of Korea Patent Application No. 10-2024-0117934*. **Co-inventor.** Aug 2024
- Co-led development of the 3D medical-image framework for generating hypoperfusion lesion segmentation maps using anatomical information.

Teaching Experience

-
- Machine Learning and Intelligence for Electrical Engineers** Spring 2024
Teaching Assistant, Korea University
- Ran lab sessions.
 - Answered student questions and provided academic support.
